

A Canadian gold mining, exploration and development company recently focused on recommencing mining and milling activities at its Holloway-Holt properties east of Timmins.

Employment Opportunity

St Andrew Goldfields Ltd is growing and requires interested and qualified people for the following position:

Electrical Engineer

The Electrical Engineer will be responsible for carrying out the maintenance of electrical equipment as per approved programs and schedules. Key responsibilities include performing maintenance work according to established priorities, performing physical inspections of the production machinery and auxiliary equipment to ensure that the equipment is functioning properly, pointing out abnormalities in the equipment through physical inspections and providing inspection reports based on observations such as variation in sound, reading of indicators on the control panel and directly observing the equipment on site. Additionally, the Electrical Engineer will visit damaged equipment to inspect the equipment to find out the reason for damage, find out the repair/problem history of the equipment, and complete required repair and spare parts or material replacement as needed. Follow up on repair activities and inspection on completion of repair work will be required to ensure quality of work and removal/prevention of defects.

St. Andrew Goldfields offers competitive salary and benefits packages. In addition, the company offers travel allowances, automatic and matched pension contributions, an attractive Employee Share Purchase Plan and many more employee programs.
