

A Canadian gold mining, exploration and development company recently focused on recommencing mining and milling activities at its Holloway-Holt properties east of Timmins.

HEAVY EQUIPMENT MECHANIC

Our mechanics are responsible for the continuous availability of underground and surface mobile fleet and components that are integral to our mining activities. Duties for this position include, but are not limited to, servicing, testing, troubleshooting and repair of all mobile equipment to ensure sustainable availability. This role will be responsible for troubleshooting, fault finding, repairs and recommending solutions on LHD's, jumbos, longhole drills, 30 ton rock trucks and various man carriers . Mechanics are also responsible for carrying out maintenance schedules and logging/recording completed work.

Qualified applicants will have a valid Ontario or inter-provincial heavy equipment trade qualification, a strong background and understanding of hydraulics and auto electrical, familiarity with reading hydraulic & electrical schematics & blueprints combined with two to three years of experience, preferably in underground mining or a similar environment. The successful incumbent will be a self-starter with a solid technical background and proven troubleshooting skills.

St. Andrew Goldfields offers competitive salary and allowance packages.
