

A Canadian gold mining, exploration and development company recently focused on recommencing mining and milling activities at its Holloway-Holt properties east of Timmins.

MINE ELECTRICIAN

Our electricians are responsible for the continuous availability of electric and electronic systems and components that are integral to our mining activities. Duties for this position include, but are not limited to, construction, installation, alteration, testing, troubleshooting and repair of all electric or electronic systems, components and cables from 110 volts up to 13,200 volts. This role will be responsible for troubleshooting faulty electrical systems and recommending solutions.

Qualified applicants will have a valid Ontario or inter-provincial electrical trade qualification, a strong background and understanding of distributed control systems (DCS), programmable logic controls (PLC) & microprocessors, familiarity with reading electrical schematics & blueprints combined with two to three years of experience, preferably in underground mining or a similar environment. The successful incumbent will be a self-starter with a solid technical background and proven troubleshooting skills.

St. Andrew Goldfields offers competitive salary and allowance packages.
